

# CSC 495.002 – Case Study: Privacy Incidents Analysis

Dr. Özgür Kafalı  
North Carolina State University  
Department of Computer Science

For the case study, you are going to analyze each others' answers to the survey carried out in class. Specifically, you are responsible for the following two tasks:

1. Every member in the group individually evaluates the answers in their assigned dataset using the following qualitative scale:
  - (B) Bad. The answer is either empty or not relevant to the incident.
  - (A) Acceptable. The answer is relevant to the incident, but some potential answers are missing.
  - (E) Excellent. The answer is comprehensive with respect to the incident.

One member of the group takes the lead on resolving potential disagreements among group members, and report the process, e.g., where common disagreements are.

2. Each remaining member of the group will come up with an interesting research question regarding the assigned dataset, and answer the question by analyzing the dataset.

**Deliverables:** Each group is going to submit a report and present their findings in class.

- Report: Prepare a two to three page report. Each member of the group uses approximately one page to describe the research question he/she looked at and to report the findings regarding the research question. The deadline to submit the report is November 6th – 5PM.
- Presentation: Each group will present their findings in class. Each group has 10 minutes total. Each member of the group has to present the research question he/she looked at. I suggest each member prepares one slide for explaining the research question and one slide for the findings regarding the research question. Presentations will be on November 8th.
